Solid Waste Enforcement Team

APRIL 2023

During this month a total of 159 activities related to solid waste and recycling were completed by the staff.

1. **Facility Inspections:** A total of 50 various recycling, disposal, and transfer facilities were inspected resulting in no violation observed.
2. **Solid Waste Investigations and Complaints:** MCHD inspected a total of 37 solid waste transport units (garbage trucks, compactors and roll-off dumpsters), with 1 violation observed. Additionally, 2 complaints were investigated.
3. **Recycling Compliance Inspections:** Staff conducted 70 recycling field inspections with 1 violation observed.

Hazardous Materials Response Program

APRIL 2023

Our unit responded to a total of Four (4) hazmat incidences/complaints for the month of April 2023. In addition, twenty four (24) OPRA requests for property searches were processed by the staff. The highlights are as follows:

On April 1st MCHD was requested into Wall township for an aircraft crash which resulted in a release of jet fuel. MCHD made an initial inspection and due to the aircrafts position and incoming severe weather a decision was made to hold off on moving the plane and removing fuel until the morning of April 2nd. On April 2nd, MCHD along with aircraft mechanics, transferred all remaining fuel, ensured proper storage of fuel, and ensured that the plane was safely removed from the crash site.

On April 1st while finishing up at Monmouth Executive airports fuel spill, MCHD was requested into Tinton Falls to assist Police and Fire with an apparent chemical suicide. MCHD performed monitoring of the scene to ensure safe victim removal and performed proper packaging of chemicals for proper disposal.

All other complaints were routinely handled .

Air and Noise Program

The Air and Noise Program investigates all air pollution complaints received from citizens and NJDEP. These complaint investigations include, but are not limited to, open burning, odors, particulate emissions/smoke, permits and certificates, and motor vehicle idling. Complaints referred by NJDEP must be investigated within 24 hours of receipt unless a more immediate response is warranted based upon NJDEP review.

The staff holds certificates in odor, noise and visible emissions issued by the Rutgers Air Pollution Program. During this month, the Air and Noise Program investigated 2 NJDEP referrals. No violations found.

In addition, the Air and Noise Program conducts minor source compliance inspections at facilities that utilize boilers < 20 million BTU/hr., emergency generators, woodworking equipment (at schools), degreasers, waste oil burners, mobile equipment refinishing, auto body shops, government buildings, schools, office buildings, apartment buildings, as well as dry cleaners. Each year the Air Program is required to meet a quota of inspections set by the NJDEP.

Water Pollution Control Unit

PRIVATE WELL TESTING ACT

- 11 PWTA's water results from county residents.

NJDEP Referred Water Complaints

- 1 NJDEP Referred Water Pollution Complaint

Public Non-Community Water System

- 1 PNC-Non-Transient Inspections
- 8 PNC Transient

MRC Volunteer Coordinator

As of April 29, 2023, membership for the Monmouth County Health Department Medical Reserve Corps was 240 active members.

COVID-19 activities during the month included:

- 9 volunteers participating in seven COVID-19 clinics.

In non-emergency support and training

- 2 volunteers provided Registration support the County Wellness Biometric Screening event.
- 12 volunteers attended the Stop the Bleed Training on March 13, 2023
- 18 volunteers attended the Close Out Celebration of the Brookdale Clinic on March 28, 2023.

Immunization Program

In-house meetings, webinars, conferences, community activities, fairs, outreaches:

4/5/23—Clinic @Asbury Park for Covid-19 vaccinations

4/14/23—EHR demonstration at MCHD for nursing staff

4/18/23—Clinic @MCHD for Covid-19 vaccinations

CHC –children’s immunization clinic/HB2:

4/6/23—12 vaccinations reviewed/provided for 6 children.

4/10/23—2 vaccinations reviewed/provided for 1 child.

4/13/23—24 vaccinations reviewed/provided for 9 children.

4/20/23—7 vaccinations reviewed/provided for 3 children in Mdt.

4/24/23—4 vaccinations reviewed/provided for 1 child.

4/26/23—2 vaccinations reviewed/provided for 1 child.

4/27/23—12 vaccinations reviewed/provided for 5 children.

Monthly total of children added to Healthy by Two Program:

1 Child

Monmouth County Immunization Program:

- 26 Children and adolescents immunized; parent and/or guardian given VIS-vaccine information statements, education provided with regards to risks and benefits, and post vaccination care instructions given.
- 63 Vaccinations administered during immunization clinics.

ARCH Program

Training, Meetings, & Conferences:

- NJ Doh Vax Calls – every Monday 1pm
- Supervisory Meeting – every Monday 9:30am
- Two EMR system translation demos
- NJEPA Preparedness meeting – Atlantic City 04/17, 04/18, 04/20

Offsite Clinics and Events:

- Howell – 04/22/2023, Freehold 04/04 and Neptune, 04/12
- Twelve PCR tests submitted
- Fifty-seven Covid Vaccinations between 8 clinics

ARCH Activities:

- New Hope 04/13 and 04/27 – saw 13 clients for CT, GC and Hep C testing
- Referred clients to STI clinic for routine testing and treatment
- Three clients seen in-house for STI testing
- STI Presentation 04/14/2023 for Youth Academy Challenge school in Sea Girt
- ARCH Program initiated for monthly presence at Middletown Twp. Health Department 2nd Friday of the month

Middletown:

- Middletown school audit efforts – completed Preschool audits – 25 total
- First CIC at Middletown 04/20, 4 children vaccinated
- Total of 44 of 45 schools audited in MT by entire MCHD nursing staff – to be completed next Monday
- Total nursing hours for month on Middletown 59

Lead Poisoning Control Program

Training, Meetings, & Conferences

- 28th Annual Public Health Symposium at Rutgers University on April 3, 2023
- Train.org Webinar: “Community Engagement: The People's Approach to Improving Health and Social Outcomes” on April 10, 2023
- NJAAP Lead ECHO Planning Meeting on April 12, 2023
- NJAAP Lead ECHO Planning Meeting on April 19, 2023
- NJAAP Childhood Lead Prevention Project ECHO Monthly Session on April 19, 2023
- Chexout EMR Demo on April 14, 2023
- NJACCHO Enhancing Local Public Health Infrastructure Local Health Department Grant Meeting on April 21, 2023
- NJDOH Vaccine Operations COVID-19 Provider Update on April 21, 2023
- CDRSS for Childhood Lead Training/N.J.A.C. 8:51 & 8:51A Refresher at NJDOH on April 25, 2023

Accomplishments

- Provided health education to community members at Healthy Kids Day at the Red Bank YMCA on April 29, 2023.
- Offered capillary lead screenings to all children at weekly Child Immunization Clinics. Written education provided in English or Spanish to all parents present at clinics. Four lead screening clinics held; two screenings performed.
- Monitored CDRSS daily for new child and adolescent lead cases.
- Reviewed active and pending lead cases in CDRSS.
- Conducted two initial home visits.
- Provided educational materials to families visited.
- Provided Lead & Healthy Homes supplies to families visited.
- Made telephone calls and sent faxes/letters to providers, insurance case managers, and/or families for lead case updates.
- Updated Excel files with quarterly data to include new and active lead cases.

New Confirmed Cases	8
Pending Cases	0
Existing Active Cases	27
Cases Closed	1
Total Confirmed Cases	26

Other Public Health Nursing/COVID-19 Activities

- Conducted one school immunization audit.
- On call week of April 10, 2023 through April 17, 2023.
- Provided verbal education on public health to Brookdale Community College Nursing Students at Child Immunization Clinic on April 20, 2023.
- Assisted ARCH Nurse at ARCH clinic on April 27, 2023.
- Participated in COVID-19 vaccination/testing clinics: transported vaccine and ancillary supplies to and from sites, assembled and filled vaccine syringes, monitored temperature of vaccine throughout clinics, administered vaccinations, and oriented and supervised MRC volunteers and contract nurses providing vaccinations, testing, and observation. Entered inventory/dose information for doses administered at clinics into NJIS.
 - Monmouth County Health Department on April 4, 2023
 - Neptune Senior Center on April 12, 2023
 - Monmouth County Health Department on April 18, 2023

COVID-19

The COVID-19 pandemic is still an important part of the Monmouth County Health Department throughout April.

- In April, the Monmouth County Health Department held 8 Covid-19 vaccination clinics with a total 48 vaccines provided.
- The collaborative clinic at Brookdale Community College ended on March 28, 2023. The collaboration which included Monmouth County, RJW Barnabus and Brookdale College. The Brookdale clinic has been relocated to the Monmouth County Health Department at 50 East Main Street Freehold from 4 to 6 pm. Vaccines are also being given at the sites located in Neptune, Asbury Park, Howell, and Middletown as well as at pop-up clinics throughout the county.
- Testing continued throughout April with 8 clinics at 8 testing sites. The Monmouth County Health Department tested 7 people.
- Case investigation and contact tracing for Covid-19 continued but will end in May 2023. We continued to utilize contract tracers from the New Jersey Department of Health.

Home Bound Vaccination

The Monmouth County Health Department continued to vaccinate homebound residents of Monmouth County with the Covid-19 vaccine. The department received requests via NJ Department of Health Office of Local Public Health Regional Hotspot Coordinator, the health department email, and calls directly made to the Monmouth County Health Department. The Monmouth County Medical Reserve Corps was utilized to vaccinate residents who were deemed homebound with the vaccine they required. For the month of April, 1 resident was vaccinated.

Lyme Disease

Tickborne-Lyme Disease

Tickborne/Lyme disease is an illness caused by bacteria that is carried by ticks. This infection can cause a variety of symptoms. Tick borne/Lyme diseases are reportable with 48 hours of diagnosis to the local health department. The Communicable Disease Reporting Surveillance System (CDRSS) facilitates the data reporting. Positive laboratory reports are entered into CDRSS by an established lab daily. The NJSHD through CDRSS transmits all Tickborne/Lyme's disease investigation data to the Centers for Disease Control for a statewide surveillance.

The Monmouth County Health Department, Field Representative, accesses and investigates all positive Tickborne/ Lyme disease cases. The NJDOH Tickborne/ Lyme disease case investigation clinical information, risk factors and treatments, are entered into CDRSS data base, and cases are confirmed and closed.

The Tickborne/ Lyme disease reporting data for the municipalities under the jurisdiction of the MDCH monthly statistics are as follows:

April 2023

New Cases: 7

Investigation of Cases: 7

Closed Cases: 2

Tuberculosis Control Clinic

For the month of April 2023, the Monmouth County Health Department provided complete and ongoing case management to 6 active tuberculosis cases, monitoring of 11 contacts to active cases including screenings, evaluations, and treatment.

The Monmouth County Tuberculosis Control program provided assessment and monitoring of “Direct Observation Therapy” performed by its own department as well as local health departments to active tuberculosis cases in the various communities to maintain compliance with the New Jersey Department of Health standard of Care.

The Department provided tuberculosis exposure testing on site to several families upon their recent exposure.

TB-70 reports on all active tuberculosis cases and TB-41 reports on ongoing “Contact Investigations” were updated and forwarded to New Jersey Department of Health to comply with protocol.

Some of the many tasks included communicating with local hospitals and other medical facilities, educating, and addressing issues within the diverse Monmouth County communities, scheduling appointments for evaluations, running clinics, providing screenings and assessments as needed, monitoring of ongoing treatment regimens.

HEPATITIS (A, B, C)	39
VECTORBORNE DISEASE BABESIOSIS EHRlichiosis ANAPLASMOSIS SPOTTED FEVER	7
VACCINE-PREVENTABLE DISEASE	21

Outbreaks

Monmouth County Health Department (MCHD) was notified of four disease outbreaks in long-term care facilities and two disease outbreaks in school settings in April 2023. Out of these six total outbreaks, two were related to COVID-19, three were gastrointestinal illnesses, and one was for Strep. In conjunction with the New Jersey Department of Health (NJDOH), MCHD provided recommendations to the facilities and has been conducting surveillance for additional cases.

Salmonella Outbreak Linked to Flour

On April 28, 2023, General Mills issued a voluntary recall for some of their Gold Medal flour products because they may be potentially contaminated with

Salmonella infantis, a specific strain of *Salmonella* bacteria that can lead to intestinal illness. Common symptoms include diarrhea, nausea, and vomiting.

Since December 2022, there have been 13 people infected with this specific strain of *Salmonella* across 12 states, including New Jersey. Three hospitalizations and zero deaths have been reported. FDA conducted a traceback investigation to locate a potential contamination source and identified a production facility in Missouri where this specific outbreak strain was detected in a flour sample. CDC recommends throwing away any recalled flour products and to refrain from consuming any raw products with flour.

The MCHD Communicable Disease team continues to investigate reported cases of *Salmonella* as well as following up on any suspected gastrointestinal outbreaks in the community.

More information related to this outbreak can be found at the following links:

<https://www.cdc.gov/salmonella/infantis-03-23/index.html>

<https://www.fda.gov/safety/recalls-market-withdrawals-safety-alerts/general-mills-recalls-four-gold-medal-unbleached-and-bleached-all-purpose-flour-varieties-dated>

Tick-borne Disease Awareness Month

Governor Murphy recently issued a proclamation that May is Tick-borne Disease Awareness Month. Although ticks can be active throughout the whole year, May is a good time to remind everyone that tick season is arriving since they are most active during the warmer months.

In 2019, there were over 3,600 reported Lyme disease cases in New Jersey, which was the 3rd highest number of cases reported in the nation. Ticks that are in their nymph stage can be particularly dangerous since they're about the size of a poppy seed allowing them to bite humans undetected.

If you ever find a tick attached to your body, it's recommended to use fine-tipped tweezers to grasp the tick as close to the skin's surface as possible. Then pull upward with steady pressure. After removing the tick, clean the bite area and your hands with rubbing alcohol or soap and water.

More information from NJDOH's website regarding vector-borne illnesses and Governor Murphy's proclamation can be found at the following link:

<https://www.nj.gov/health/cd/topics/vectorborne.shtml>

Mosquito Control Division

April 2023

Monthly Statistics

Mosquito Control

- As of April 30, the Division has received 24 Requests for Service from the public of which 18 were received in April. Inspectors have conducted 13 inspections related to these requests. Of these, 5 were found supporting larvae and were treated.
 - In April, 132 larviciding sites were inspected with most activity occurring in the western zone of the county. This is typical in the spring where water lies in woods and floodplains before trees leaf out and temperatures warm sooner than the coast.
 - Aerial operations to treat western airblocks began on April 6. Inspectors checked over 90 airblocks and gave the pilot lists to treat. With significant rainfall, missions were flown April 11-12 and April 23-25 and 28. In April, 13040 lbs of Vectobac GS were applied to 3,260 acres. This amount is consistent with 2021 but close to double the area treated in April 2022.
 - Significant rainfall (3-6.5 inches) over the weekend of April 28-30 has left standing water in most freshwater airblocks and larviciding hot spots. Luckily cooler temperatures are slowing development. Aerial operations commenced on Wednesday, May 2 but warmer temperatures next week could result in mosquitoes emerging.
- ULV machines for adult mosquito control have been calibrated.

Mosquito Surveillance

- Larval surveillance and identification began in April
- NJ Light Traps were installed at 16 locations with daily collections beginning May 2. Four additional traps will be installed at NWSE when security clearances are finalized.
- 50 Resting boxes were placed at the Turkey Swamp site. Five of these plywood boxes will be randomly replaced with plastic versions as part of a statewide comparison trials. RB collections will begin during the second week of May.

Vector surveillance preparations have been completed with the mixing of an initial batch of “stinkwater” infusion bait for the gravid traps and delivery of dry ice for CDC traps. Mosquitoes seeking water to lay eggs are attracted to the organic water and those looking for a bloodmeal are attracted to the CO₂.

Tick-borne disease Management Program

- Spring surveillance for adult deer ticks continues at Hartshorne Woods and Manasquan Reservoir where Bourbon virus had been detected. Adult specimens of deer tick, dog tick and lone star ticks have been collected. Deer tick and Asian longhorn tick nymphs are beginning to show up in surveys as well. May and June are historically the months of concern for nymphal ticks which can carry pathogens and easily go undetected.
- Through the end of March, the public have submitted 73 ticks, about 20% below the long-term (2006-2022) average for this point in the year, but equal to the average for the last 5 years (75.0 ± 7.8).

Public Education

- May is Tick-borne Diseases Awareness Month
- The Division had information tables at Bradley Beach festival on April 22 and Healthy Kids Day in Red Bank.
- Arrangements were made to place tick education displays at 4 county libraries that have room for such. Educational brochures were distributed to several other libraries.
- Several print orders have been submitted to restock brochure inventories for upcoming events.

Special Projects/Initiatives

- The Division completed and submitted the documentation needed to participate in the State Mosquito Control Commission's Airspray Program. As we are fortunate to have our own aerial application program, our participation serves as a back-up should the helicopter or pilot be out of commission for an extended period.
- RIMS staff continue to scan Mosquito Extermination Commission records requiring permanent retention (payroll, general ledger) into the RIMS system.
- Several boxes of non-permanent records of the Mosquito Extermination Commission were destroyed after receiving State approval.
- Expired pesticides and golf cart batteries used for BGS traps were disposed of at Household Hazardous Waste.

Major Operational Updates

- An Intergovernmental Services Agreement with Naval Weapons Station Earle for the Division to provide mosquito surveillance and control services in 2023 was authorized by the County Board of County Commissioners and was sent to NWSE for signature.
- The Mosquito Control Division is participating in Workforce Development's Summer Youth Program with 5 employees qualifying for the program.

Great progress has been made with the mosquito control inspection database app with the essential monthly reporting function now available for the 2023 season.

Challenges, Gaps, Barriers, Resident Needs

- All mosquito control seasonal positions have been conditionally filled. To date, only two seasonals are scheduled to begin on May 15. Processing of candidates by HR has been extremely slow with candidates interviewed in early April still awaiting conditional employment letters. While HR staffing shortages are to blame, delays in bringing seasonal employees on board will impact our control operations. Hopefully the majority of seasonals will be on board by June 1.

Registered Environmental Health Specialists

Retail Inspection Definitions of Risk Types:

Risk Type 1 Food Establishment is any retail food establishment that:

1. Serves or sells only prepackaged, non-potentially hazardous foods
2. Prepares only non-potentially hazardous foods
OR
3. Heats only commercially processed potentially hazardous foods for hot holding and does not cool potentially hazardous foods. Such retail establishments may include, but are not limited to, convenience store operations, hot dog carts, coffee shops.

Risk Type 2 Food Establishment is any retail food establishment that has a limited menu and:

1. Prepares, cooks, and serves most products immediately
2. Exercises hot and cold holding of potentially hazardous foods after preparation or cooking
OR
3. Limits the complex preparation of potentially hazardous foods, including the cooking, cooling, and reheating for hot holdings, to two or fewer items. Such retail establishments may include but are not limited to: retail food store operations, schools that do not serve a highly susceptible population, and quick service operations, depending on the menu and preparation procedures.

Prepares and serves potentially hazardous foods including the extensive handling of raw ingredients and whose primary service population is a highly **Risk Type 3 Food Establishment** is any retail food establishment that:

1. Has an extensive menu which requires the handling of raw ingredients and is involved in the complex preparation of menu items that includes the cooking, cooling, and reheating of at least three or more potentially hazardous foods
OR
2. susceptible population. Such establishments may include, but are not limited to, full-service restaurants, diners, commissaries, and catering operations or hospitals, nursing homes, and preschools preparing and serving potentially hazardous foods.

Risk Type 4 Food Establishment is a retail food establishment that conducts specialized processes such as smoking, curing, canning, bottling, acidification designed to control pathogen proliferation, or any reduced oxygen packaging intended for extended shelf-life where such activities may require the assistance of a trained food technologist. Such establishments include those conducting specialized processing at retail.
